MC11

Peggy’s calculator has been malfunctioning. The screen does not display the numbers that she enters, only the results from the calculation. Further, the calculator has a random error that changes a 7 to an 8 with probability $\frac{1}{6}$ and changes an 8 to a 7 with probability $\frac{1}{4}$. Peggy is going to enter

$$878 - 878$$

in this calculator. If all other keys are functioning correctly, what is the probability that she finds a nonzero answer?
